

Market sizing — bottoms-up (US only)

Step 1: Starting population

US adults aged 20–35: **67M** (Census 2024: 20–24 = 21.5M, 25–29 = 22.4M, 30–34 = 23.1M)

Step 2: Filter to people who plan social outings and save places

Our survey showed 9/10 respondents save places digitally. Apply 60% filter to account for passive savers and people who rarely plan group outings.

$67M \times 60\% = \sim\mathbf{40M}$ (serviceable addressable market)

Step 3: Filter to people who would adopt Moves

Our survey showed 80% positive reaction to the concept. Apply a heavy discount to 40% for real-world adoption behavior (people who say yes don't always download).

$40M \times 40\% = \sim\mathbf{16M}$ realistic target users in the US

Step 4: Realistic 3-year penetration

Assume 5% penetration of the 16M target base within 3 years — conservative for a well-distributed app.

$16\text{M} \times 5\% = 800,000 \text{ active users}$

Revenue per user (commission model)

- **Average group size:** 4 people (survey responses)
- **Average per-person restaurant spend:** \$42 (BLS / PYMNTS 2024)
- **Average group bill:** \$168 ($4 \times \42)
- **Moves-facilitated outings per user/month:** 2 (survey: most plan monthly or more)
- **Commission rate:** 5% (OpenTable-comparable)
- **% of outings with a partnered venue:** 40% (assumes modest venue network)

Monthly revenue per active user:

$2 \text{ outings} \times 40\% \text{ venue coverage} \times \$168 \times 5\% = \text{\$6.72}$

Annual revenue per active user: ~\$80

Revenue at different scales

Active users	Annual revenue
100,000	\$8M
400,000	\$32M
800,000	\$64M

Notes

- US only. UK, Canada, and Australia represent a comparable additional opportunity (~2x if included).

- Venue commission % could increase as Moves proves ROI — OpenTable charges ~\$1/cover (~3-5% of a meal); Seats and inKind prove restaurants pay more for proven group traffic.
- Does not include any user subscription revenue, which could layer on top if introduced later.
- The 40% venue coverage assumption is the biggest variable — early growth depends on signing enough venue partners to make commissions viable.
